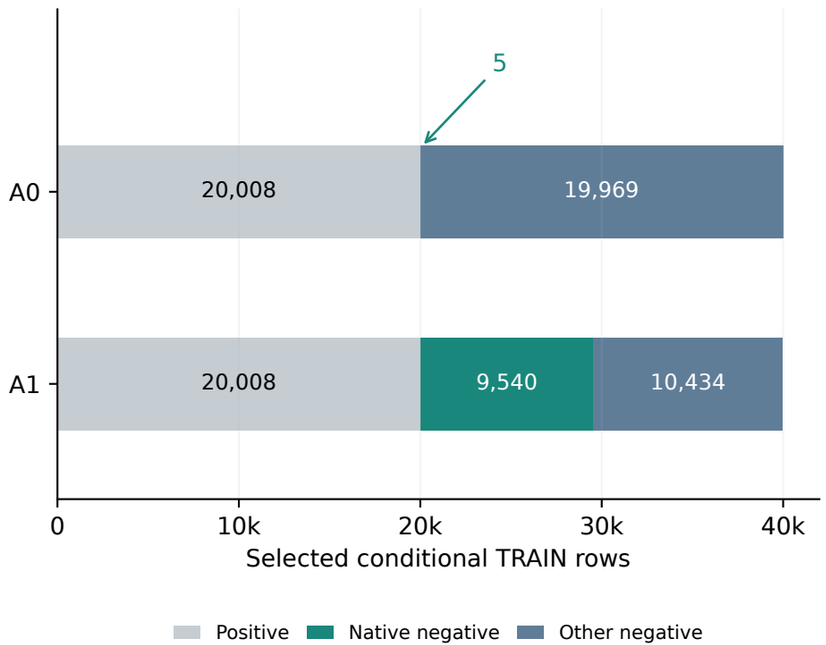
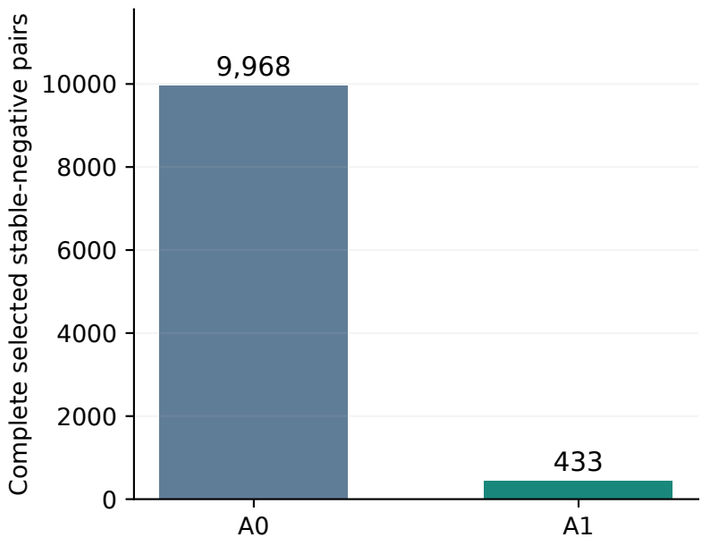
A seed0: changed training exposure and first development outcomes

Fixed 39,982 conditional rows | matched BF16 fits | declared u2104 | first outcomes retained

A Row composition at fixed budget

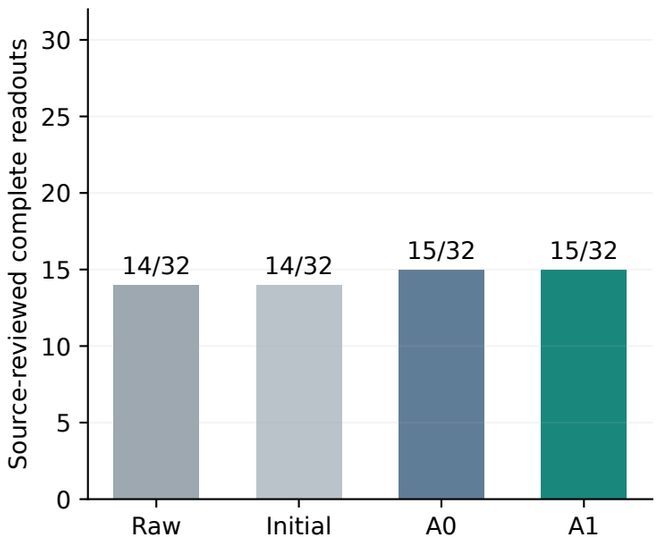


B Relationship support also changes



80 stable-positive and 6 change pairs kept in both.
Pairs are relationships; independent sample count is unchanged.

C Exposed 32-family panel



A1-A0: gains 0 / losses 0 / ties 32.
Missing state kept; later repeat excluded.

Raw matrices and unknown masks retained. Shared-corpus development; these conditional readouts are not autonomous Host or independent-corpus confirmation.
Stable-negative support and optimizer grouping change with sampling. Evidence does not support an isolated native-negative-only effect or adoption.
